

Infrastructure

Cels Infrastructure division is focused on creating physical environments for early and mid stage life science businesses.

North East England has a range of business incubators, bio-parks and business parks for healthcare companies. Cels manages some of these and provides business support services to tenants of others. These include:

Cels at Newcastle Micro Incubator

A 4,000 square feet, fully serviced incubator facility comprising individual 400-square foot units for start up life science or healthcare companies. The facility is located within Newcastle University's Medical School, with tenants able to benefit from on-site scientific support and business support from Cels, the facility manager. Tenants also have an on-site communal meeting room, utility room and on-site board room facilities and are able to benefit from access to shared equipment use within the medical school by prior arrangement.

Speak to us...to find out more about this facility, contact Kenny Lang on 0191 215 5519.
