

Cels Structure

To successfully deliver our strategy, Cels has been organised into the following main operating divisions:

Infrastructure - Focuses on creating physical environments, laboratory space and equipment for early and mid-life science businesses.

Technology Management - Undertakes a wide range of activities including horizon scanning, market research, project management, technology development and business opportunity targeting.

Venturing - Provides expert senior management teams to early stage technology companies bringing business and strategic planning advice, driving fundraising to support growth and commercialisation of IP.

HealthConnect - A membership network providing support for regional businesses and the scientific community driving best practice and collaboration for successful business development.

NEPAF (North East Proteome Analysis Facility) - An analytical and research laboratory specialising in the identification and analysis of proteins.

CBSL (Cels Business Services Limited) - Provides commercial business focused services to public and private clients, delivering performance improvement solutions to meet your needs.
